

EXPERIENCE COMMUNICATION CARE FOR DETAILS

CRIF is **the leading provider in continental Europe of banking credit information**, one of the key players worldwide providing integrated services and solutions for **business & commercial information** and **credit & marketing management**, and is included in the prestigious FinTech 100, a ranking of the leading global technology solution providers to the financial services industry. Nowadays more than **6,300 banks and financial institutions**, **55,000 business clients** and **310,000 consumers** use CRIF services in **50 countries** on a daily basis.

CRIF Poland is looking for a **Senior Java Software Engineer** to join the development team in Kraków. We need a quickly learning, autonomous specialist that will help us move our software to the next level by applying optimal architecture design, modern technologies and best software development practices. In particular we are looking for a person interested in large software systems, distributed architecture, efficient data processing and complex algorithms. This is an offer for a professional wishing to make a non-trivial contribution to a serious software project as the next step in her or his career.

Responsibilities:

- Initiate and supervise refactoring of the source code and the architecture
- Lead the technological evolution by proposing improvements and new ideas
- Design and implement new features and change requests, involving the full technology stack, from the user interface down to the database
- Investigate and fix more complicated software issues
- Assure high quality by maintaining testable source code
- Mentor junior developers and perform code reviews
- Maintain superb relations with colleagues inside and outside the team for efficient cooperation

We offer:

- Extensive social package
- Great people, great work
- Possibility to have personal influence on the technological landscape of the project

Key skills:

- Proven record of 5+ years of experience with large scale software architecture
- Hands-on experience with Java, Spring, SQL database engine (preferably Microsoft SQL Server or Oracle), a web application UI framework (Angular or other), web service technology (SOAP or REST)
- Knowledge of architecture of distributed systems
- Practice with Java web applications and web services
- Experience at working with complex business requirements
- Ability to convey complicated technical ideas to both IT and non-IT persons
- Team spirit: We strongly believe that cool ideas are born by teamwork
